

Oil and Gas Production Application Maps

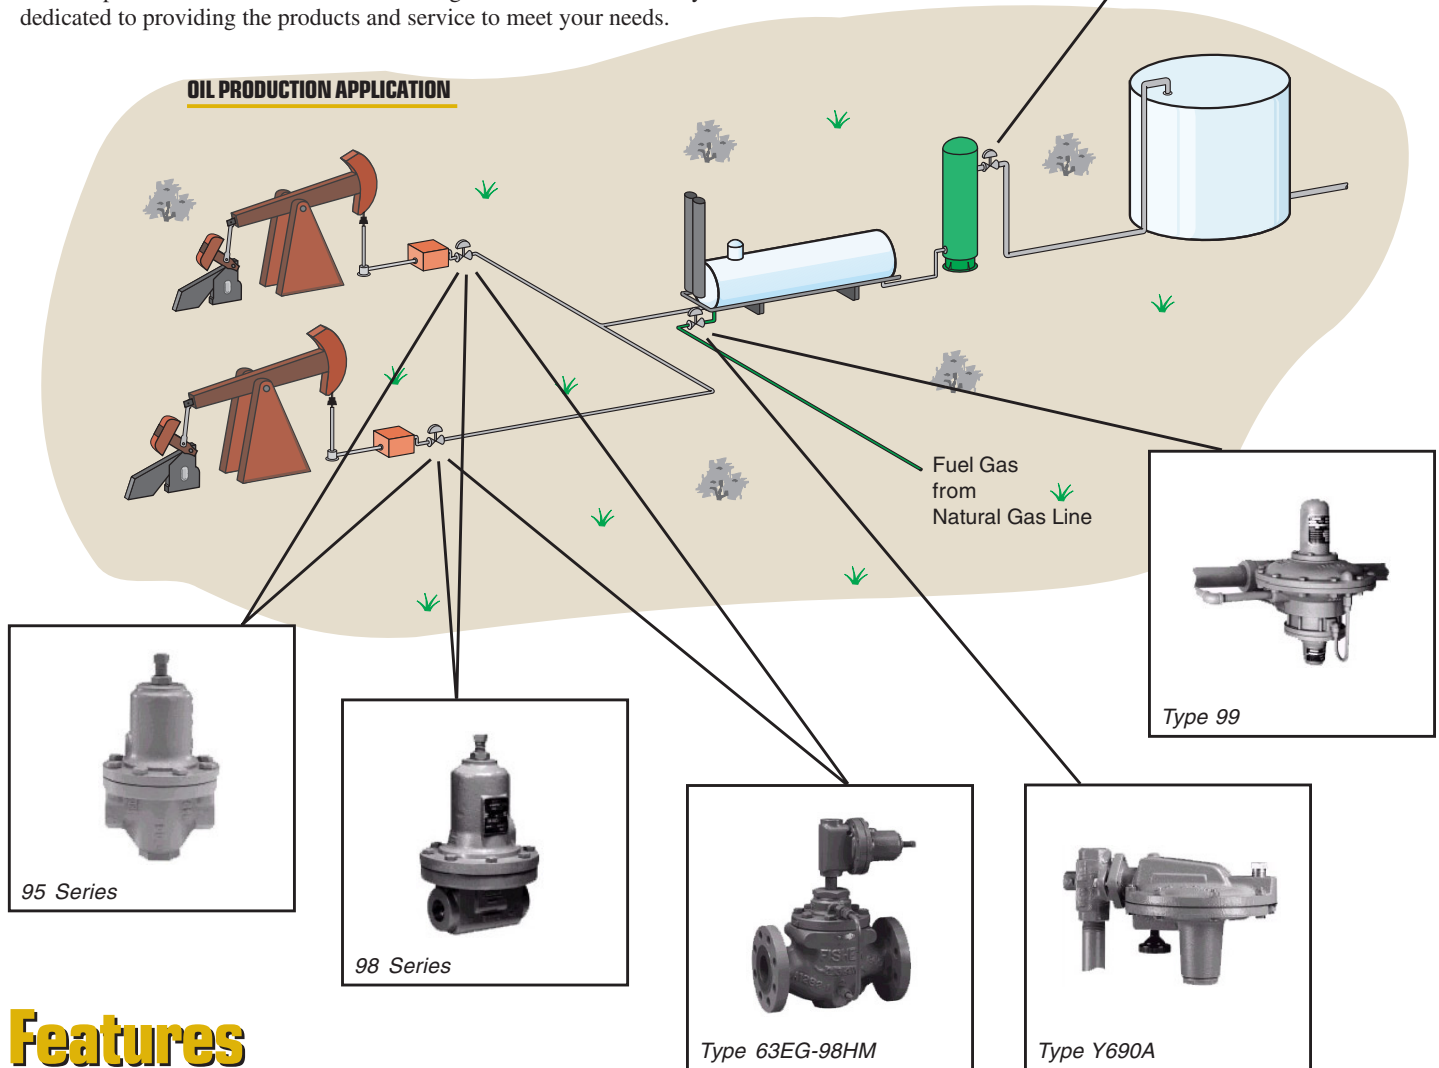

Fisher offers a complete line of pressure control and level control equipment from the wellhead to the end user for the oil and gas industry. This handbook includes pressure regulators and relief/backpressure regulators. For information on other Fisher products contact your local Fisher Sales Representative.

Recognized worldwide for ruggedness and dependability, Fisher regulators are built to handle your toughest oil and gas production applications. Fisher also offers a wide material selection, such as steel, stainless steel, Monel, Hastelloy C, ethylenepropylene (EPDM), fluoroelastomer (FKM), perfluoroelastomer (FFKM), and teflon (TFE and PTFE), for applications requiring special constructions. Many of Fisher's regulators are NACE compatible for sour gas applications.

Fisher regulators, such as the Type 627, Type 630 Big Joe®, and the 67 Series, have become industry standards for performance and extended service life. These regulators and many other standard regulators are readily available locally or from your Fisher Sales Representative. Local representatives and Fisher Sales Representatives stock most standard regulator constructions for your convenience. Fisher is dedicated to providing the products and service to meet your needs.

OIL PRODUCTION APPLICATION

Features

- **Wide Range of Products**
- **Time Proven Design**
- **Readily Available Stock**
- **Material Compatibility**
- **Products Built for Rugged Use**
- **Fast Parts Delivery**
- **NACE Constructions Available**
- **Application Expertise**
- **Global Support Network**
